The Cell of Immortality

The Spark of Life

At the moment the sperm enters the ovum

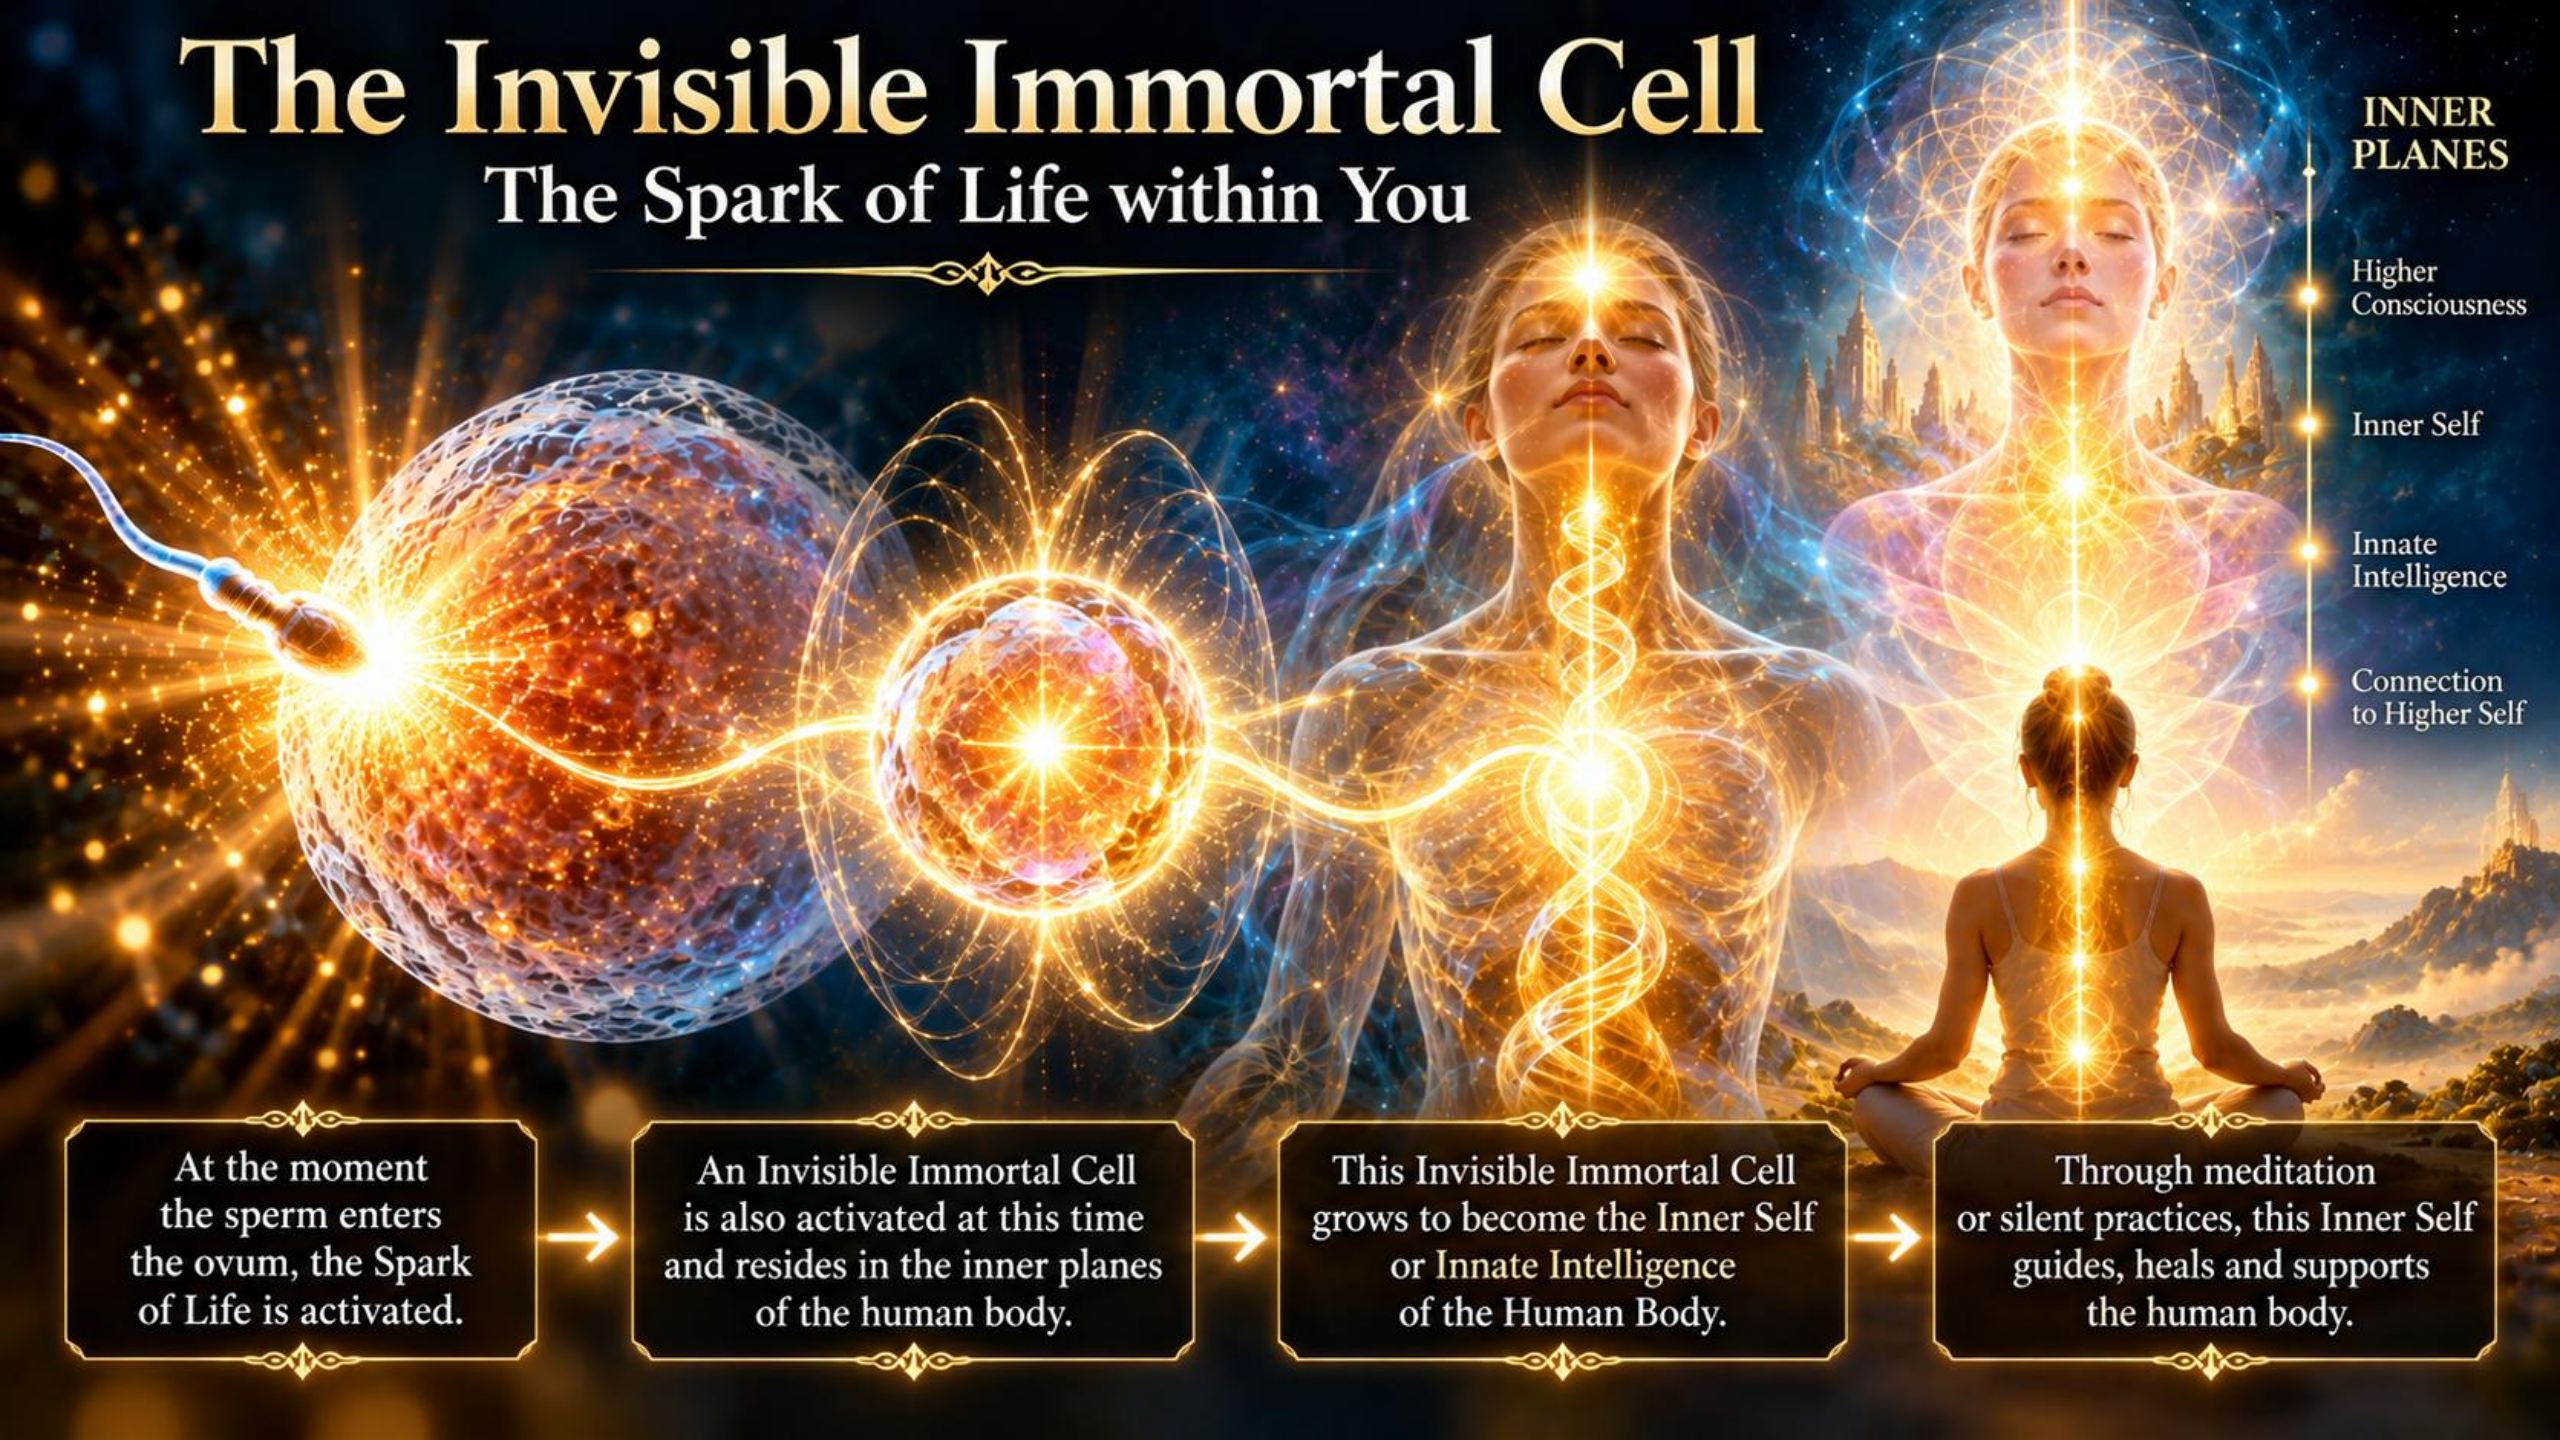

Fluorescent zinc-sensitive dye makes the released zinc visible as a burst of light.

Research: Northwestern University — mouse fertilisation studies (2011); human egg activation study (2016).

The Invisible Immortal Cell

The Spark of Life within You

At the moment the sperm enters the ovum, the Spark of Life is activated.

→

An Invisible Immortal Cell is also activated at this time and resides in the inner planes of the human body.

→

This Invisible Immortal Cell grows to become the Inner Self or Innate Intelligence of the Human Body.

→

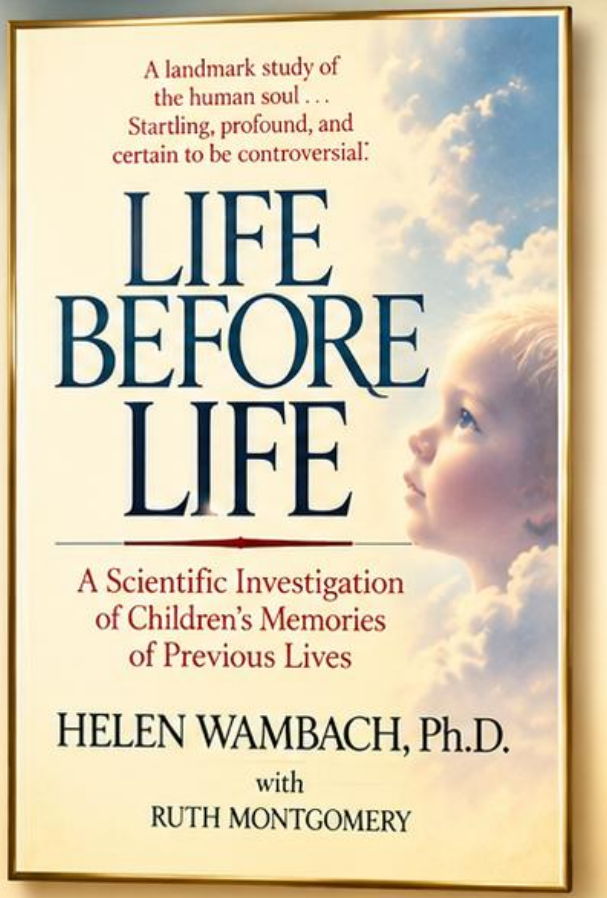

Through meditation or silent practices, this Inner Self guides, heals and supports the human body.

When Does the Soul Enter the Fetus?

Metaphysical research and accounts of pre-birth experiences suggest that the soul's connection with the developing fetus may occur between the third and sixth months of pregnancy.

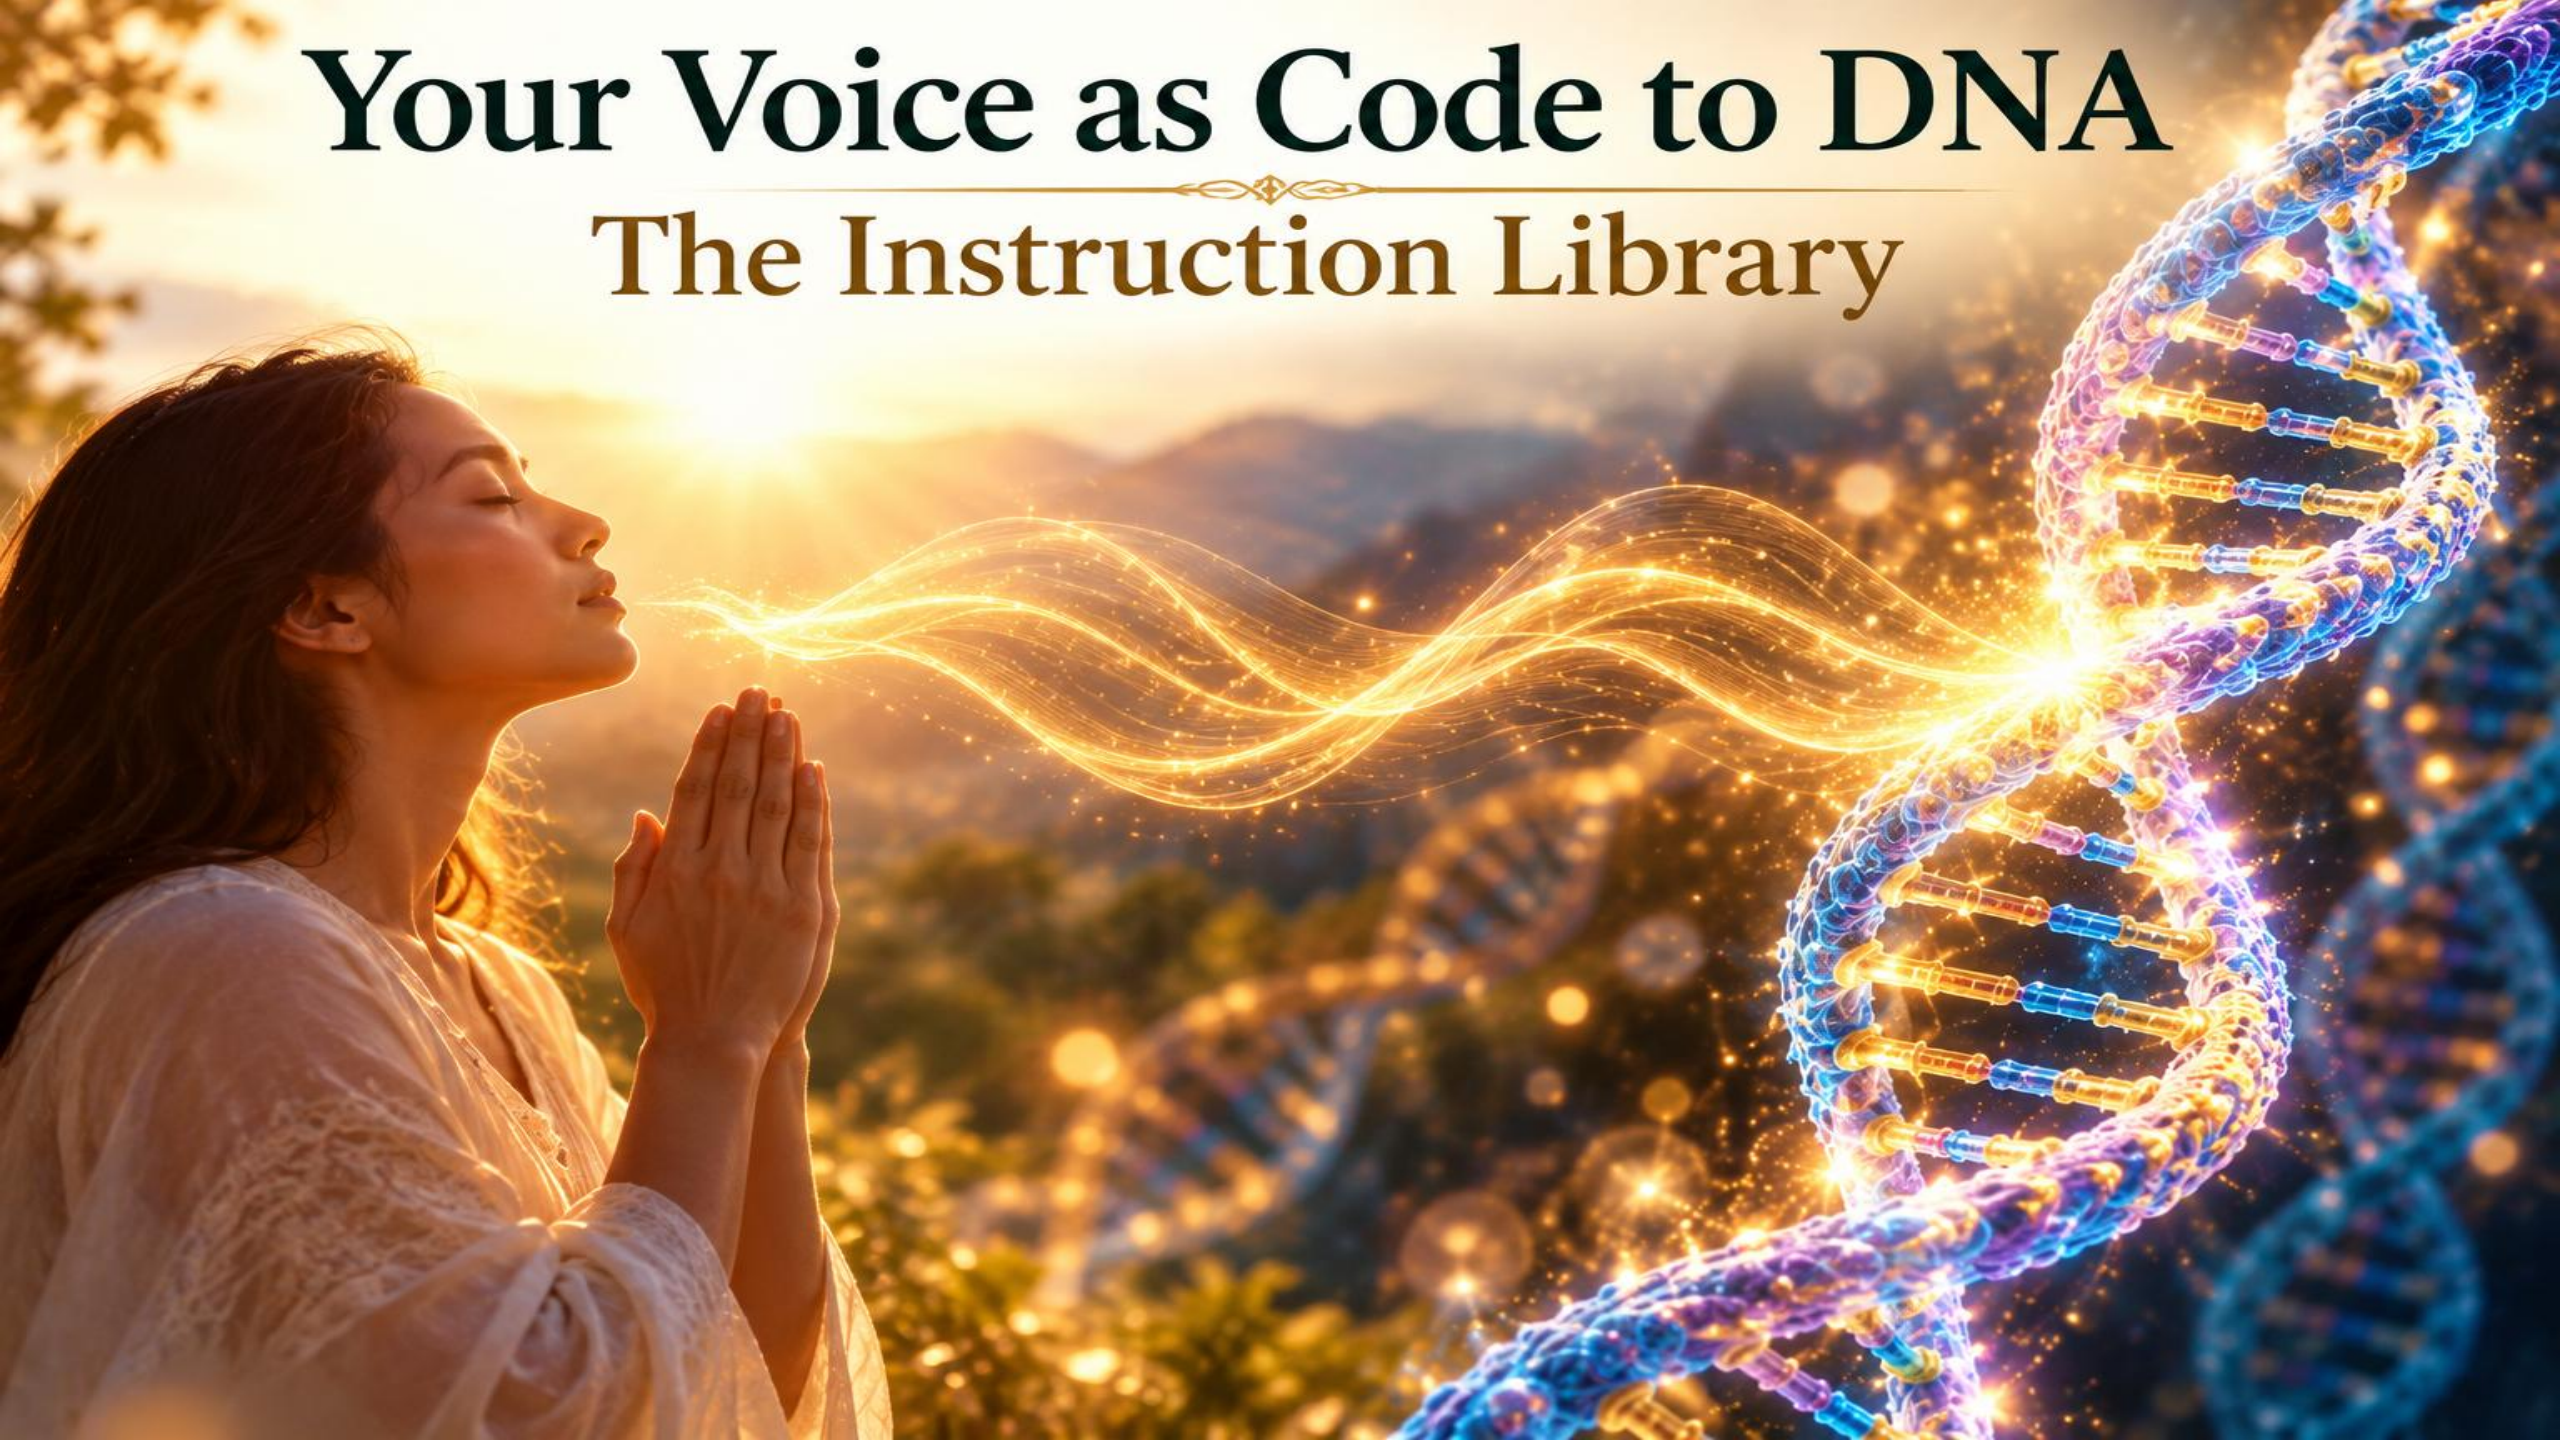

In *Life Before Life* (1979), psychologist Helen Wambach investigated the pre-birth experiences reported by 750 participants under hypnosis. In Chapter 6, she explored when participants felt their consciousness or soul had joined the developing fetus.

Wambach reported that approximately 12 per cent of her participants described being in the fetus after about six months of gestation.

Every cell in your body can absorb and adapt to the energy of immortality from this immortal cell.

3 The Awake-Asleep State

A Powerful Time for Inner Communication

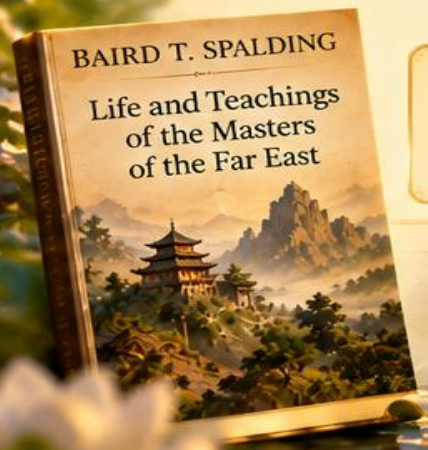

When you are between awake and asleep,
messages or visions are easily absorbed and understood
by the body.

4 The Morning Code of Renewal

Speak to Your Cells — 3 Times Each Morning

*"Every cell in my body now listens to this Code of Instruction.
I now align with the immortal cell born during conception.
Every cell absorbs and adapts to the energy of Immortality from this Immortal Cell and now drinks from the Fountain of Youth.'"*

Recite 3 times every morning when you are still in bed.
